Rare postwar glass-body deep bowl reflectors

€1000 + tax

We managed to get hold of another batch of the original glass shades! – Only a few available! Originally operated as 250–500W vapour discharge lamps, these gems were usually suspended in pairs beneath factory ceilings. Only a few were produced in the 1950s in East Germany, probably based on designs by the Leipzig firm Kandem, short for Körting & Mathiesen. Fitted with a ceramic socket, we've converted these lights to work with standard E27 bulbs, nickel-plated the steel upper section and painstakingly cleaned the moulded glass. The structured glass makes for some beautiful lighting effects. Knurled nuts are used to simply yet elegantly attach the glass shade. The height of the internal ceramic socket and bulb can be altered with a metal rod to adjust the light cone. Please note: You can choose your own cord color and length!

Dimensions:

height 50 cm (19,7") | diameter 34 cm (13,3")

Availability:

on request
