Elaborately designed single fluorescent tube

€795 + tax

This rare, very early type of single fluorescent tube lamp made in the 1950s in East Germany was mainly used in light industrial buildings. It is distinguished by an unusually elaborate design with the exposed fluorescent tube braced by a thin chrome-plated steel rod. The two-part aluminium housing containing the fluorescent lamp ballast is centrally positioned while the stylish connection box is made out of die-cast aluminium. After having the paint stripped, all parts of the light have been re-polished while the electrics have been upgraded. The fixture takes standard fluorescent tubes.

Dimensions:

height: 32cm (12,6")

length: 125cm (49,2")
