High-gloss polished double fluorescent tube with long pendant fitting | Short, early era

€1.150 + tax

A rare, compact version of the bestseller TUD2/P. This very early type of double fluorescent tube lamp made in East Germany was mainly used in light industrial buildings. It is distinguished by an unusually elaborate design with the exposed fluorescent tubes. The two-part aluminium housing containing the fluorescent lamp ballast is centrally positioned. This type comes with a black Bakelite connection box. After having the enamel paint stripped, all parts of the light have been re-polished while the electrics have been upgraded. The fixture takes standard fluorescent tubes. On request we can alter the length of the pendulum.
