Article-ID Chicken

Chicken experimental set-up

€900 + tax

Preserved chicken embryo from an old school specimen used to explain the development of the domestic fowl. The specimen has been dried and positioned between a concave mirror and a magnifying glass held in place by a brass and steel laboratory stand dating back to about 1870. The boundaries between the embryo and its reflection are blurred by the distortion caused by the concave mirror.

Dimensions:

height: 23cm (9")
width: 29cm (11")
depth: 14cm (5,5")
